*pH7X beer line cleaning recommendation: **A 2% overnight soak for the first cleaning is HIGHLY recommended**

Then move to a 1% 20 minute soak for future static cleaning, or 20 minute recirculation cleaning

***ALWAYS GRADUALLY MIX POWDER TO H2O, NOT H2O TO POWDER, as pH7X is a highly oxidizing compound.** Fill the cleaning canister with half of the H2O needed, then add half of the powder and mix. Then gradually add the rest of the H2O and powder, all while mixing.

*For CIP cleaning: Start filling the FV, kettle, etc. and add powder. The spray ball will do the mixing.
